Set loop points, adjust speed, and track your reps — no account or extension required.

About

YouTube Repeat & Loop is a YouTube repeat tool for looping any video with A-B precision. It lets you set exact start and end points, slow down or speed up playback, count reps, and share a session link without creating an account or installing an extension.

What is YouTube Repeat & Loop

YouTube Repeat & Loop is a YouTube repeat tool built for focused practice on any video hosted on YouTube. It centers on A-B looping, so you can isolate a short phrase, riff, move, or lesson segment and repeat only that section instead of replaying the entire

video. The site says it is free, works in the browser, and does not require signup, a download, or a browser extension.

The app is aimed at deliberate practice rather than casual playback. It supports exact loop points, speed changes, rep tracking, and shareable sessions, which makes it more useful than a basic YouTube repeat button when you need to drill one moment until it sticks.

Key features

This YouTube repeat tool focuses on practical controls that help you stay inside one learning loop.

- **A-B precision looping:** mark a start point and an end point to repeat only the segment you care about.
- **Second-level or finer timing control:** the site describes timestamp entry and drag handles for precise placement.
- **Variable speed playback:** slow a video down to 25% or speed it up to 200%.
- **Fine speed steps:** speed can be adjusted in 0.05× increments.
- **Rep counter:** track how many times you have repeated a section.
- **Keyboard shortcuts:** use S and E to set loop points without leaving the keyboard.
- **Shareable session URLs:** every session can be encoded into a link with the video, loop points, and speed.
- **Restore on any device:** open the saved link to recreate the same YouTube repeat setup.
- **Progressive tempo training:** the tool can increase tempo after a set number of loops.

The combination of loop control and rep tracking makes this YouTube repeat app useful for practice that depends on repetition, not just watching.

How to use it

Using the YouTube repeat workflow takes only a few steps.

- **Paste a YouTube URL** into the input field at the top of the page.

- **Start the loop** and let the selected segment repeat automatically.
- **Change playback speed** if you want the section slower, faster, or gradually stepped up.
- **Watch the rep count** to keep track of drills and measure practice volume.
- **Share the session link** if you want another person to open the same YouTube repeat setup.

If you are using the keyboard, the S and E keys let you define the loop range without reaching for the mouse. That can matter when you are practicing an instrument or trying to stay in rhythm.

Who it is for

This YouTube repeat app is useful for anyone who learns by repeating short sections of video.

- **Musicians** who need to isolate a lick, groove, chord change, or difficult passage.
- **Language learners** who want to replay one sentence or phrase until pronunciation and timing feel natural.
- **Athletes and coaches** who study short movement clips and repeat a single technique cue.
- **Teachers and students** who want to share a practice session rather than explain loop settings manually.
- **Self-directed learners** who use YouTube repeat sessions as part of deliberate practice.

Because it supports exact loop points, the app is a better fit when the lesson depends on precision, not just continuous playback.

What to know before you use it

This YouTube repeat tool is simple, but there are a few limits worth knowing.

- It only works with **YouTube videos**, not arbitrary video files.
- The source material does not mention mobile apps, browser extensions, or offline

While the tool supports precise A-B points, the practical accuracy still depends on the YouTube player and the timestamps you enter.

It can help you drill and review content, but it does **not** replace official course materials, transcripts, or certified instruction when exact source text matters.

If you need authoritative timing, captions, or content verification, use the original YouTube source alongside the loop tool.

For repeated practice, this YouTube repeat app is strongest when you want fast setup, exact loop control, and a saved session you can reopen later. If your goal is to drill one clip, keep a rep count, and return to the same loop on another device, YouTube Repeat & Loop is built for that workflow.
